SUMMARY

Aspiring Junior Cybersecurity Analyst with proficiency in Linux, Python, and vulnerability assessment techniques. Eager to enhance organizational security while learning advanced cybersecurity practices.

TECHNICAL SKILLS: Python, Kali Linux

PROJECTS

EMAIL PHISHING DETECTION
- This is an open-source project designed to detect spam and phishing emails using IMAP-based email fetching and machine learning. Contributions are welcome to improve its features and performance.
- Project Link - https://github.com/ChaitanyChaudhary/Email-Phishing-Detection

PASSWORD GENERATOR IN PYTHON
- The Password Generator is a command-line program that generates random passwords based on user specifications. It utilizes the secrets module to generate cryptographically strong random numbers and the string module to define the alphabet of characters for password generation.
